

UI Expand

What is UI Expand?

UI Expand show a clickable title with expandable content.

Live Example

This is what UI Expand looks like on a page.

When first released, what was RefinedTheme for Confluence called?

It was called **RefinedWiki Original Theme**, and it looked something like this:

RefinedWiki
Original Theme

Using UI Expand

To add the UI Expand macro to a page

1

In the Confluence editor, choose **Insert > Other Macros**.

2

Search for UI Expand, when found, select and insert to the page.

Speed up macro entry with autocomplete: Type { and the beginning of the macro name, to see a list of suggested macros

To edit an existing macro

1

Click the macro placeholder and choose **Edit**.

2

A macro dialog window will open, where you can edit the parameters of the macro.

Wiki Markup

```
{ui-expand:title=My title|collapsed=false}Some content ...{ui-expand}
```

Link to an expandable item

A neat feature of this macro is that you can link to it. When expanding a UI Expand, the URL will be updated with a hash reference. This URL can be used to link directly to a collapsed item on a page. The item will be automatically expanded and scrolled down to on the page.

Example: <http://docs.refinedwiki.com/display/FAQ/Licensing+and+Pricing+questions#expand-Howdolbuyrenewandupgradelicenses>

Parameters

Parameter	Default	Description	Version
Title (title)		The title of the expandable item	1.0
Expanded (expanded)	false	expanded=true – the initial state will be expanded.	1.0.1

The collapsed parameter (only available in version 1.0) is removed due to <https://refinedwiki.atlassian.net/browse/RWUI-2> . Please use the **expanded** parameter instead.
