Uninstall guide

If you need to uninstall Refined for Confluence, and you don't intend to use it anymore, please follow these steps.

1. **Change to the default Confluence theme**
   
   Go to: General Configuration > LOOK AND FEEL > Themes, and change the global theme to the default theme.
   
   This step will prevent Confluence to look for a theme that is not there anymore.

2. **Uninstall the add-on**
   
   Go to: General Configuration > Manage add-ons > Expand Refined Theme and click uninstall add-on/app.
