Version 1.4

New features

Link a category to a single space, page or an external URL.

E.g. If you only have one space in a category you can link direct to it. You can also create external links to other websites. You can of course make the external links open in a new window.

The Original Theme is now compatible to the Confluence Colour Scheme

You can now style UI elements like links and tabs with the Confluence Colour Scheme.

Bug fixes

- The Rich Text Editor fullscreen mode is now working correctly with the Pointer templates.
