Version 3.0

- 1 Organize spaces & categories with drag and drop
- 2 Introducing the design editor
- 3 Introducing the Top menu
- 4 Category logo
- 5 Key navigation
- 6 The Point design has got a facelift
- 7 rw_category_ is removed from all team labels
- 8 New HTML structure
- 9 Bug fixes

1 Organize spaces & categories with drag and drop

- Spaces can be dragged to a category or subcategory.
- A category can be dragged to a new position.
- A subcategory can be dragged to a new category or subcategory. Subcategories can also be dragged to a new position.

More information at the Organize spaces & categories page.

2 Introducing the design editor

Custom color

Customize a design to match your company logo by just clicking!

Custom design

The design editor is an online code editor which allows you to create your own designs with the use of RefinedWiki components. Start from scratch or start from one of our system designs.
3 Introducing the Top menu

Display useful links to pages and features inside the wiki or to external sites.

More information at the Design your wiki page.

4 Category logo

More information at the Global menu page.
You can assign a logo to a category. The category logo will be displayed instead of the global logo. The category logo is linked to the category dashboard.

The link hierarchy is as follows:

<table>
<thead>
<tr>
<th>Logo</th>
<th>Destination</th>
</tr>
</thead>
<tbody>
<tr>
<td>Global logo</td>
<td>Dashboard</td>
</tr>
<tr>
<td>Category logo</td>
<td>Category dashboard</td>
</tr>
<tr>
<td>Space logo</td>
<td>Space homepage</td>
</tr>
</tbody>
</table>

5 Key navigation

We have introduce two new key navigation shortcuts.

<table>
<thead>
<tr>
<th>Key</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>n</td>
<td>Tap n to activate the key navigation of the category menu, navigate left and right with the arrows. Press down to open a category drop down menu. Tap n to get back to the category menu.</td>
</tr>
<tr>
<td>p</td>
<td>Open the top menu.</td>
</tr>
</tbody>
</table>

More information at the [Keyboard shortcuts](#) page.

6 The Point design has got a facelift

The logo is now on the same level as the categories. This saves a lot of space!

7 `rw_category_` is removed from all team labels

We have removed the `rw_category_` identifier from all team labels. A space is mapped together with a category with a team label with the same name as the categoryKey.

8 New HTML structure

We have renamed classes and IDs of HTML elements in RefinedWiki Original Theme 3.0 to make our theme more compatible with other third party plugins. Please take a look at the [Theme HTML skeleton](#) to see the new structure.

If you have made any style customization with CSS you may have to make some changes to your CSS code.

9 Bug fixes
From https://studio.plugins.atlassian.com/browse/RWOT:
