Third-party Integrations

Looking to build something that integrates with RefinedTheme? See our API for REST and JavaScript, or our Advanced Theming section for building advanced themes.

Add-ons & Confluence features in the Global Menu

Menu items from add-ons are displayed in the global menu, if the plugin developer has specified it (using 'system.header/left'). These items include for example Confluence Questions and Team Calendars.

The Confluence Default Theme displays these in the header section. All bundled and created themes in RefinedTheme will display these items in the global menu, unless hidden using CSS.

An example of compatible third party plugins is:

- Team Calendars (Team Calendars Integration)
- Gliffy Plugin
- Balsamiq Mockups
- Comala Workflows
- Scroll Versions (from Version 4.2.16)
- Archiving plugin for Confluence
- And many more...
