Confluence Questions

RefinedTheme for Confluence works great with Confluence Questions. If these add-ons are installed, you can use Confluence Questions as an alternative to comments in a space in order to create a FAQ base (as we've done in this space).

Questions Module

In addition to adding questions macros to Space layouts and dashboards, you'll be able to add a Questions module to either the Footer or Category menu.

The questions module can be configured as a regular Questions list macro to show Questions according to your settings. You add a Questions Module by creating a new category or subcategory for the category menu, or by adding a new Questions column in case it's to be used in the Footer.
