

Version 3.4.0

Added option to hide/disable macros

This release includes a *Do not render* option in the [Macro Render Rules, BETA](#)

Add Macro Render Rule

Choose a macro:

Render rule:

Render without resources
Macro resources (JavaScript and CSS files) can not be included because RefinedMobile is an one page app and most macros are not adjusted for mobile views. You should only use this option if you know that the macro works without resources.

Do not render
Do not render this macro at all.

Additional fixes and improvements

- Added native render support for the *Change History* macro.
- Fixed navigation for when clicking usernames in the notification section.
- Fixed an encoding issue with custom stylesheets added through the Refined mobile admin UI.
- The *Users* macro from Refined for Confluence now renders properly even if empty.
- Fixed a broken version check in regards to the *Table of Content* macro making that not render properly.
- Links to previous versions of a page now redirects properly to the current version.
- Avoids prompting login screen when checking favourites in a safari mobile browser.
- Fixed an issue where the Networks filter option on the Activity stream module would cause an error.
- Ensures Refined for Confluence categories are still expandable if they have content and if they have a custom url set.
- Fixed an issue where the navigation tree would indent wrongly on some Android chrome browsers.
- Links inside Refined Toolkits *UI Text Box* macros are now rendered with an underline.
